

DELTA ONLINE – INSTALLATION GUIDE

GAME INSTALLATION

1. Download the Delta Online installer from one of the links provided in the Discord channel.
2. Run the installer, and install to any directory of your choosing, but **do not** install in the Program Files directory.
It is also not recommended to install the game on an external drive.
3. A shortcut to Delta Online will be created on your desktop.
Double click the shortcut to open the launcher application.
4. You'll notice two buttons on the bottom right corner.

DOWNLOAD

INSTALL

DOWNLOAD will link you to the latest game data.

Game data and content packs are downloaded as **.DEON** archives.

INSTALL will request you to locate the game data package you downloaded.

Proceed with installation as requested.

Once installed, you may proceed to install the content packs. See the next page.

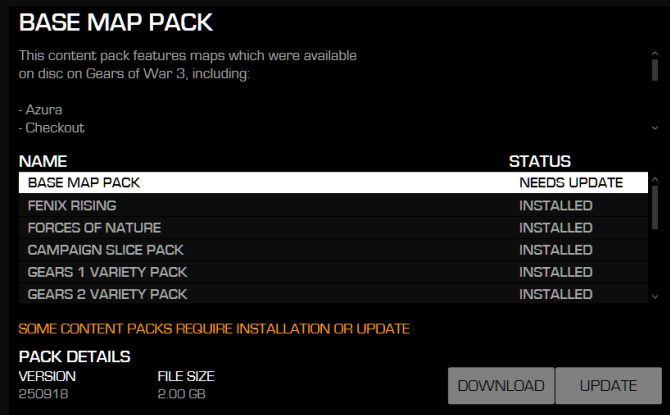

DELTA ONLINE – INSTALLATION GUIDE

CONTENT PACK INSTALLATION

Content packs serve as **DELTA ONLINE**'s method of map distribution.

All content packs are mandatory, so they must be installed before you can launch the game.

1. Click the  icon located at the bottom left of the launcher and navigate to the **CONTENT PACKS** section.

2. The **DOWNLOAD** button will link you to the latest version of each content pack. Game data and content packs are downloaded as **.DEON** archives. Download each content pack and click **UPDATE** to install them. You can install several content packs at the same time. Once all content packs are installed, you'll be able to launch the game!

DELTA ONLINE – INSTALLATION GUIDE

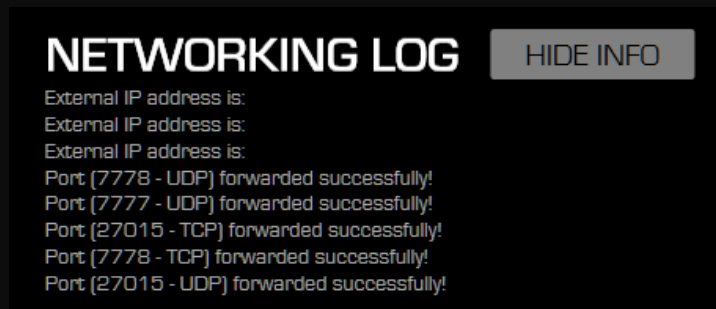

HOSTING MATCHES

DELTA ONLINE requires the following ports to be open for hosting matches:

- **7777 (Game Traffic) - UDP**
- **7778 (Game Traffic) - UDP**
- **27015 (Server Advertisement) – TCP / UDP**

The launcher will attempt to forward these ports for you via UPnP, however this may fail depending on your router configuration.

The networking log (which can be found in the settings menu) will inform you if the ports were forwarded successfully, as shown below:

If errors are thrown, then either the ports were unable to be forwarded, or you've already manually forwarded them. You'll need to manually forward these in your router settings if this fails.
